

JavaScript Display Possibilities

JavaScript can "display" data in different ways:

- Writing into an HTML element, using `innerHTML`.
- Writing into the HTML output using `document.write()`.
- Writing into an alert box, using `window.alert()`.
- Writing into the browser console, using `console.log()`.

Using `innerHTML`

To access html element,js can use `document.getElementById(id)` method.

The id attribute define html element,The `innerHTML` property define html content

The `window.print()` Method

Click the button to print the current page.
